

RanTek Performance Day

2017

KEY NOTE SPEAKER

Tony Fergusson

This years Key Note Speaker, Tony Fergusson knows how important Digital Transformation is to a company. It's a matter of survival.

Tony Fergusson is an Infrastructure architect, working with many technologies within the Enterprise with a focus on the Security. Tony has over 20 years of experience in the IT industry and has been recently focusing his efforts on how to secure the enterprise and the internet of things using emerging technologies like software defined networking and cloud security.

The IT landscape has shifted dramatically and the corporate perimeter is disappearing. In this cloud-centric, mobile-first world, how can you protect all your users, apps, and devices, wherever they are?

Tony will illustrate how the MAN Diesel & Turbo team reinvented their security architecture using cloud-based technologies and building security into the network to protect 15.000 users over 100 locations in 50 countries.

Zscaler is a pure cloud service that enabled MAN Diesel & Turbo to secure all remote offices without any hardware. Zscaler was built with the architecture for the cloud from the bottom up.

Tony Fergusson will address the fact why many IT organizations are choosing to adopt a cloud-based approach to securely enable mobility, cloud applications and social media, while ensuring compliance and reducing risk.

- Protect users from advanced threats: why traditional security approach is failing
- How to embrace cloud with full visibility and control of Shadow IT
- Allowing users to access their applications without network-layer visibility
- Getting real-time visibility and control: nine billions of user transactions in seconds to quickly identify gaps in security and ensure compliance with corporate policies
